Project Facilitates Meaningful Data, Efficient Outcomes and Quality Management, and Improved Physician Access to Patient Reports

**November 05, 2014, Oakland, CA** — LUMEDX Corporation, a leading provider of vendor-neutral cardiovascular information systems (CVIS) today announced the sale of a comprehensive, LUMEDX-hosted HealthView CVIS to Southeastern Health Heart & Vascular Center, a noted clinical-quality leader based in Lumberton, North Carolina. The CVIS encompasses cardiology PACS; physician reporting for Cath, PVI and Surgery; ECG management; and analytics dashboards and reports.

“We are excited about this opportunity to incorporate LUMEDX technology into our clinical cardiovascular workflow. LUMEDX will provide meaningful data through the use of real time dashboards, which will enhance Heart & Vascular clinical, quality, and operational success,” said Peggy Kirk, Director of the Heart & Vascular Center.

“The LUMEDX CVIS allows us to automatically track key performance indicators, quality measures, and outcomes. This provides data for efficient daily management of patient care,” noted Teresa Barnes, Southeastern Health Vice President of Acute Care Services. “In addition, using the Web-based reporting for ECG’s and images will allow physicians to have access to patient data and reports from anywhere. Physician reports after the procedure or surgery will be readily available to the referring physician, which will enhance physician satisfaction.”

“Our HealthView solutions offer cloud-delivered, single-point access to consolidated cardiovascular (CV) data, enabling improved access to patient information across the continuum of care. The hosted model delivers the breadth and depth of a full LUMEDX CVIS at a lower cost of ownership,” said Joe Peck Davis, LUMEDX Sales Director - Southeast.

The Southeastern Health Heart & Vascular Center-HealthView CVIS includes:

- In-hospital and remote structured reporting software for Cath, Invasive Peripheral Vascular (PVI) and Surgery.
- ECG Manager, a comprehensive ECG information management solution.
- CardioPACS™ image management.
- Analytics dashboards and reports.
- Registry software for ACC NCDR CathPCI Registry®, ACC NCDR ACTION Registry®-GWTG™, and STS Adult Cardiac Surgery.
- An integration suite, including ADT, Results Reporting, and MacLab interfaces.
- A toolkit to support customizations.

“Southeastern Health Heart & Vascular needed a cost-efficient way to improve access to patient data and reports, and to make information available to referring physicians directly

after a procedure. We're looking forward to helping the cardiovascular team achieve their goals," said Davis. "From PACS to analytics, we want to equip this group with the tools and services they need to grow their business."

#### About LUMEDX:

LUMEDX is the market leader in fully integrated cardiovascular information and imaging systems (CVIS), and a pioneer in cloud-powered healthcare solutions. Our comprehensive suite of software and services enables high-performance workflows, optimal integration of clinical and HIS data, and improved continuity of care. We develop all our solutions with the firm belief that the delivery and management of healthcare is best served by a community of providers linked—and empowered—by technology.
